More Recycling Facts....

OIL:

- It is easier and cheaper to recycle used oil than to make new oil from crude.
- One gallon of used oil can produce the same amount of motor oil as 42 gallons of crude oil while requiring about a third of the energy.
- Used oil can be reprocessed into fuel oil, which contains about 140,000 BTU’s of energy and can be burned efficiently.
- The U.S. currently imports about 60% of our oil and within 20 years we will be importing 100% at a cost of \$150 billion annually

ALUMINUM:

- Every minute of every day over 120,000 aluminum cans are recycled in the U.S.
- Recycling aluminum results in 95% less air pollution and 97% less water pollution than producing aluminum from natural resources.
- Recycling aluminum saves 95% of the energy that would be required to mine bauxite ore and extract alumina; the raw materials needed to manufacture aluminum.
- For each pound of aluminum recycled, you eliminate the need to mine four pounds of bauxite ore.
- Recycling 1 ton of aluminum saves the equivalent in energy of 2,350 gallons of gasoline. This is equivalent to the amount of electricity used by the typical home over a period of 10 years.
- One recycled aluminum can saves enough electricity to operate a TV for 3 hours.
